SHORTENED STATUTORY PERIOD OF RESPONSE		MAIL DATE	DELIVERY MODE	
. 3 MONTHS		01/09/2007	PAPER	

Please find below and/or attached an Office communication concerning this application or proceeding.

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

## Defice Action Summary    The MAILING DATE of this communication appears on the cover sheet with the correspondence address → Period for Reply  A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS. WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  **SERVEN MONTHING the available works the provisions of 30°CFR 1.358(s), in no event, however, may a reply be finely lited in 180 parts of creep is specified above, the maximum studiory period will appear and will appear to reply a specified above, the maximum studiory period will appear and will appear by the finely filed, may reduce any entered patent term adjustment. See 37°CFR 1.704(s).    Status			Application No.	Applicant(s)			
Period for Reply  A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 2 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  Extensions for me may be available under the provision of 37 CF1.13(6), in no event, however, may a reply be limbly filed or this communication.  If NO period for reply is available under the provision of 37 CF1.13(6), in no event, however, may a reply be limbly filed.  If NO period for reply is available under the provision of 37 CF1.13(6), in no event, however, may a reply be limbly filed.  If NO period for reply is available under the provision of 37 CF1.13(6), in no event, however, may a reply be limbly filed of this communication.  If NO period for reply is action of the communication of 37 CF1.13(6), in no event, however, may a reply be limbly filed of this communication.  If NO period for reply is action of the communication of 37 CF1.13(6).  Status  1) Separative manufacture and supplication is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.  Disposition of Claims  4) Claim(s) 1-3.5.7-24 and 26-31 is/are pending in the application.  4) Of the above claim(s) 4.6 and 25 is/are withdrawn from censideration.  Claim(s) 1-3.5.7-13.18-24 and 28-31 is/are rejected.  Claim(s) 1-3.5.7-13.18-24 and 28-31 is/are rejected.  The drawing(s) filed on is/are: a) accepted or b) objected to by the Examiner.  Application Papers  9) The specification is objected to by the Examiner.  10 The drawing(s) filed on is/are: a) accepted or b objected to by the Examiner. #### **DETAILED ACTION**

#### Election/Restrictions

1. Applicants elected Group I (Claims 1-3, 5, 7-13, 18-24 and 28-31) without traverse. Claims 14-17 and 26-27 are drawn on the non-elected group.

Claims 1-3, 5, 7-24, 26-31 are pending in the application.

## Response to Arguments

2. Applicant's arguments with respect to claims 1-3, 5, 7-13, 18-24 and 28-31have been considered but are most in view of the new ground(s) of rejection.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-3, 5, 8-13, 18-24 and 28-31are rejected under 35 U.S.C. 103(a) as being unpatentable over Lewis et al. (U.S. Patent 6,233,565 B1) herein referred to as Lewis in view of Korn et al. (U.S. Patent 6,442,607 B1) herein referred to as Korn.

Regarding Claims 1 and 28, Lewis discloses a system for protecting sensitive information residing in server environments, comprising at least one processing device

Art Unit: 2135

coupled among at least one network and at least one client computer (col. 2, lines 30-33), wherein the at least one processing device (server):

receives at least one electronic transaction query (transaction request) from the at least one client computer (client) via at least one secure channel (SSL) (col. 5, lines 30-40 and col. 15, lines 40-45);

encrypts the sensitive data (col. 14, lines 26-28);

transfers the encrypted sensitive data among components of the server environment (col. 29, lines 27-34);

receives at least one electronic information query for the encrypted sensitive data from at least one third-party system via the at least one secure channel (col. 14, lines 25-29);

decrypts the encrypted sensitive data in response to the at least one electronic information query (col. 16, lines 65-67); and

provides the decrypted sensitive data to the at least one third-party system via the at least one secure coupling (private network connection) (col. 17, lines 1-5).

Lewis does not discloses "applying a user-defined pattern matching expression to identify sensitive data within the at least one electronic transaction query."

However, Korn expressly discloses applying a user-defined pattern matching expression to identify sensitive data within the at least one electronic transaction query (Figure 2, col. 2, lines 4-20, col. 3, lines 20-64).

Therefore, It would have been obvious to one of ordinary skill in the art at the time the invention was made to have incorporated Korn's invention with Lewis to include

Art Unit: 2135

applying a user-defined pattern matching expression to identify sensitive data within the at least one electronic transaction query. One of ordinary skill in the art would have been motivated to prevent the transmission of the data that indicates the personal information items (Korn, col. 2 lines 47-48).

Regarding Claim 2, Lewis discloses a method for protecting sensitive information within server environments, comprising:

wherein sensitive data of the at least one electronic request is encrypted before transfer among components of the server environment (col. 14, lines 25-30)

wherein encrypted sensitive data of the server environment is decrypted before transfer from the server environment (col. 17, lines 1-3).

Lewis does not discloses "applying at least one cryptographic operation to sensitive data in response to the at least one electronic request."

However, Korn expressly discloses applying at least one cryptographic operation to sensitive data in response to the at least one electronic request (Figure 2, col. 2, lines 4-20, col. 3, lines 20-64).

Therefore, It would have been obvious to one of ordinary skill in the art at the time the invention was made to have incorporated Korn's invention with Lewis to include applying at least one cryptographic operation to sensitive data in response to the at least one electronic request. One of ordinary skill in the art would have been motivated to prevent the transmission of the data that indicates the personal information items (Korn, col. 2 lines 47-48).

Regarding Claim 3, Lewis and Korn disclose the limitations as discussed in Claim 2 above. Lewis further discloses comprising determining that the at least one electronic request includes sensitive data (col. 14, lines 35-40).

Regarding Claim 5, Lewis and Korn disclose the limitations as discussed in Claim 2 above. Lewis further discloses determining that sensitive data in the electronic request includes at least one user password; and applying at least one hash function to the at least one user password (col. 22, lines 58-63).

Regarding Claim 8, Lewis and Korn disclose the limitations as discussed in Claim 2 above. Lewis further discloses wherein the at least one electronic request comprises at least one protocol over Secure Socket Layer (col. 15, col. 40-45).

Regarding Claims 9 and 21, Lewis and Korn disclose the limitations as discussed in Claim 2 above. Lewis further discloses wherein the sensitive data comprises at least one data item selected from a group including credit card numbers, credit card information, account numbers, account information, birth dates, social security numbers, user information, and user passwords (col. 17, lines 5-15).

Regarding Claim 10, Lewis and Korn disclose the limitations as discussed in Claim 2 above. Lewis further discloses executing the at least one cryptographic operation using at least one public key (col. 22, lines 20-25).

Regarding Claims 11 and 22, Lewis and Korn disclose the limitations as discussed in Claim 2 above. Lewis further discloses wherein the at least one cryptographic operation includes at least one operation selected from a group including encryption operations, decryption operations, hash operations, keyed hash operations, and keyed hash verification (col. 22, lines 60-65).

Regarding Claim 12, Lewis and Korn disclose the limitations as discussed in Claims 2, above. Lewis further discloses wherein encrypting includes performing at least one operation on the sensitive data selected from a group including hashing and keyed hashing when the sensitive data is a password (col. 22, lines 58-64).

Regarding Claim 13, Lewis and Korn disclose the limitations as discussed in Claim 2 above. Lewis further discloses wherein the at least one electronic request comprises at least one encoded key identifier (col. 23, lines 25-35).

Regarding Claim 18, Lewis discloses a system for protecting sensitive information within server systems, comprising

at least one processing device coupled among at least one server site and at least one client computer and at least one network (FIG. 2, col. 5, lines 30-40 and col. 15, col. 40-45),

wherein the at least one processing device applies at least one cryptographic operation to sensitive data in response to the at least one electronic request (col. 14, lines 25-28),

wherein the sensitive data of the at least one electronic request is encrypted prior to transfer among components of the at least one server system (col. 14, lines 26-28),

wherein encrypted sensitive data of the at least one server system is decrypted prior to transfer among the at least one network (col. 17, lines 1-3).

Lewis does not disclose "wherein the at least one processing device identifies, using regular expression, sensitive data inside the electronic request."

However, Korn expressly discloses wherein the at least one processing device identifies, using regular expression, sensitive data inside the electronic request (Figure 2, col. 2, lines 4-20, col. 3, lines 20-64).

Therefore, It would have been obvious to one of ordinary skill in the art at the time the invention was made to have incorporated Korn's invention with Lewis to include wherein the at least one processing device identifies, using regular expression, sensitive data inside the electronic request. One of ordinary skill in the art would have been motivated to prevent the transmission of the data that indicates the personal information items (Korn, col. 2 lines 47-48).

Regarding Claim 19, Lewis and Korn disclose the limitations as discussed in Claim 18 above. Lewis further discloses wherein the at least one processing device determines that the at least one electronic request includes sensitive data by identifying tags indicating that associated data is the sensitive data (col. 6, lines 1-15).

Regarding Claim 20, Lewis and Korn disclose the limitations as discussed in Claim 18 above. Lewis further discloses wherein the at least one processing device determines that the at least one electronic request includes sensitive data by identifying tags specified by at least one system administrator that associated data is the sensitive data (col. 6, lines 1-15).

Regarding Claim 23, Lewis discloses a cryptographic appliance for securing sensitive information within a server system, comprising:

at least one processing device coupled among at least one server system and at least one network coupling to evaluate at least one received electronic request in a first protocol format (col. 5, lines 30-40 and col. 15, lines 40-45),

wherein the at least one processing device (server) (FIG. 2);

determines when the at least one received electronic request includes sensitive data (col. 22, lines 40-50);

encrypts the sensitive data (col. 14, lines 26-28).

Art Unit: 2135

Lewis explicitly does not disclose "reforms the electronic request, including the encrypted sensitive data, in the first protocol format."

However, Korn expressly discloses reforms the electronic request, including the encrypted sensitive data, in the first protocol format (Figure 2, col. 2, lines 4-20, col. 3, lines 20-64).

Therefore, It would have been obvious to one of ordinary skill in the art at the time the invention was made to have incorporated Korn's invention with Lewis to include reforms the electronic request, including the encrypted sensitive data, in the first protocol format. One of ordinary skill in the art would have been motivated to prevent the transmission of the data that indicates the personal information items (Korn, col. 2 lines 47-48).

Lewis and Korn disclose the limitations as discussed in Claim 23 above. Lewis further discloses transfers the reformed electronic request among at least one component of the at least one server system (col. 29, lines 27-34).

Regarding Claim 24, Lewis and Korn disclose the limitations as discussed in Claim 23 above. Lewis further discloses wherein the at least one processing device: evaluates at least one request for the encrypted sensitive data received via at least one coupling with at least one third-party system (col. 2, lines 30-40);

decrypts the encrypted sensitive data (col. 14, lines 26-28); and transfers the decrypted sensitive data to the at least one third-party system (col. 17, lines 1-5).

Page 10

Application/Control Number: 10/038,169

Art Unit: 2135

Regarding Claim 29, Lewis a device comprising:

a processor (Figure 2);

a network interface coupled to the processor (Figure 2);

a pattern matching engine coupled to the processor (Figure 2);

a cryptographic engine coupled to the processor (Figure 2);

wherein, in operation, first one or more packets including payload formatted in a first protocol are input on the network interface (col. 5, lines 30-40 and col. 15, lines 40-45);

the cryptographic engine applies a cryptographic transformation to the sensitive data (col. 29, lines 27-34);

the processor forms second one or more packets including the cryptographically transformed sensitive data and the non-sensitive data in the first protocol (col. 14, lines 25-28);

the second one or more packets are output on the network interface (col. 29, lines 27-34);

Lewis explicitly does not disclose "the pattern matching engine applies a pattern to the payload to determine which portion of the payload includes sensitive data and which portion of the payload includes non-sensitive data."

However, Korn expressly discloses the pattern matching engine applies a pattern to the payload to determine which portion of the payload includes sensitive data and

Art Unit: 2135

which portion of the payload includes non-sensitive data (Figure 2, col. 2, lines 4-20, col. 3, lines 20-64).

Therefore, It would have been obvious to one of ordinary skill in the art at the time the invention was made to have incorporated Korn's invention with Lewis to include the pattern matching engine applies a pattern to the payload to determine which portion of the payload includes sensitive data and which portion of the payload includes non-sensitive data. One of ordinary skill in the art would have been motivated to prevent the transmission of the data that indicates the personal information items (Korn, col. 2 lines 47-48).

Regarding Claim 30, Lewis and Korn disclose the limitations as discussed in Claim 29 above. Lewis further discloses a database of cryptographic keys, wherein, in operation, the cryptographic engine uses a key from the database of cryptographic keys to cryptographically transform the sensitive data (col.22, lines 1-50).

Regarding Claim 31, Lewis and Korn disclose the limitations as discussed in Claim 29 above. Lewis further discloses wherein the cryptographic transformation includes decryption or encryption (col. 29, lines 26-35).

4. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lewis and Korn as applied to claim 2 above, and further in view of Devine et al. (U.S. Patent 6,598,167 B2) herein referred to as Devine.

Art Unit: 2135

Regarding Claim 7, Lewis and Korn disclose the limitations as discussed in Claim 2 above.

Page 12

Lewis and Korn explicitly does not disclose "determining the at least one electronic request includes one or more cookies; identify at least one cookie of the one or more cookies that includes sensitive data; applying at least one cryptographic function or checksum to the at least one cookie."

However, Devine teaches "determining the at least one electronic request includes one or more cookies; identify at least one cookie of the one or more cookies that includes sensitive data; applying at least one cryptographic function or checksum to the at least one cookie" (col. 8, lines 45-60).

Therefore, It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate Devine's invention with Lewis and Korn to have included the cookie with the motivation being to allow adding an additional level of security (col. 8 lines 55-60).

### **Contact Information**

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Baotran N. To whose telephone number is 571-272-8156. The examiner can normally be reached on Monday-Friday from 8:00 to 4:30.

Art Unit: 2135

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kim Y. Vu can be reached on 571-272-3859. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
